Datrend Systems launches Ventilator Tester

Datrend Systems Inc. is pleased to announce the launch of their latest product, VenTest.

VenTest is designed to accurately test the performance of Ventilators and Anaesthetic Delivery Systems. With a small footprint, data analysis and waveforms are generated onboard and displayed on its 7" touch screen display thereby removing the need for a laptop. Test templates and reports can be stored and retrieved from the removable SD card or USB external memory. VenTest provides comprehensive testing of regular and high frequency ventilators, and has an optional multi gas analyzer for Anaesthetic agents.

Ron Evans, President of Datrend Systems stated, "The launch of VenTest is an important step forward for Datrend as it allows us to enter an area of the market where we were previously excluded. This product is the first of several we will be launching over the coming months that will expand our portfolio".
